

SOUND DAMPENING EFFECTS OF STOPAQ®

Presserv can now present a documented, value-added benefit by choosing STOPAQ® as a corrosion prevention system - sound dampening. External testing at the Peutz Group Laboratory for Acoustics has proven that the STOPAQ® system has inbound properties for sound dampening.

After testing several different configurations, STOPAQ® standard corrosion protection showed almost a negative 10 decibel reduction at 8000Hz. Although this may not seem significant, every 3 dB represents a 50% reduction in sound.

FREQUENCY	1000 Hz	2000 Hz	4000 Hz	8000 Hz
Stopaq CZHT and HTTP	-1.0	-2.0	-6.5	-9.5
